

Call for Papers

Participatory Data Analysis in/as Feminist Research

We invite chapter proposals for a book collection edited by Claudia Mitchell, Kaylan Schwarz, and Rebekah Hutten.

This volume will bring together scholarship that explores the multidimensional intersections between participatory data analysis and feminist research. Participatory data analysis refers to a range of collaborative methodologies wherein study participants engage in the data analysis process to varying degrees. It can also refer to research teams engaging in non-hierarchical and/or collective approaches to working with data. We are specifically interested in research that employs participatory data analysis within a feminist-themed study and/or research that positions participatory data analysis as a feminist method, and encourage submissions that address these topics conceptually and/or empirically. We invite single-author and multi-author proposals from researchers across disciplines.

Chapters could address:

- The feminist potentials of participatory data analysis;
- The extent to which researchers involve study participants in the data analysis stages and in what ways;
- How research teams might engage in non-hierarchical and/or collective approaches to working with data;
- The role of researchers' and/or participants' positionality;
- Ethical commitments and/or tensions;
- How findings generated through participatory data analysis can contribute to feminist theorization and/or feminist engagement;
- Knowledge mobilization/dissemination strategies, among other topics.

Chapter proposals should include author name(s), affiliation(s), bio(s), a chapter title, and a chapter abstract (300-400 words).

Please submit proposals in a PDF document to
rebekah.hutten@mcgill.ca

Deadlines:

- Deadline for chapter proposals: 30 August 2022
- Invitations to submit a full paper draft: 30 September 2022
- Deadline for full paper drafts (6000 words including references):
30 December 2022
